

sil_senegal_knf_azerty:

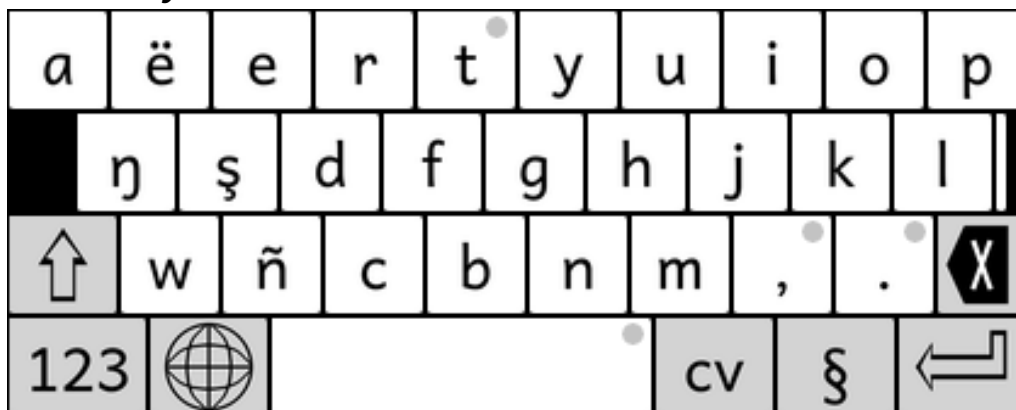

A keyboard for the «knf:Mankanya (Latin)» language,
which generates NFC Unicode characters.

Created by SIL Senegal. ©2023 SIL International

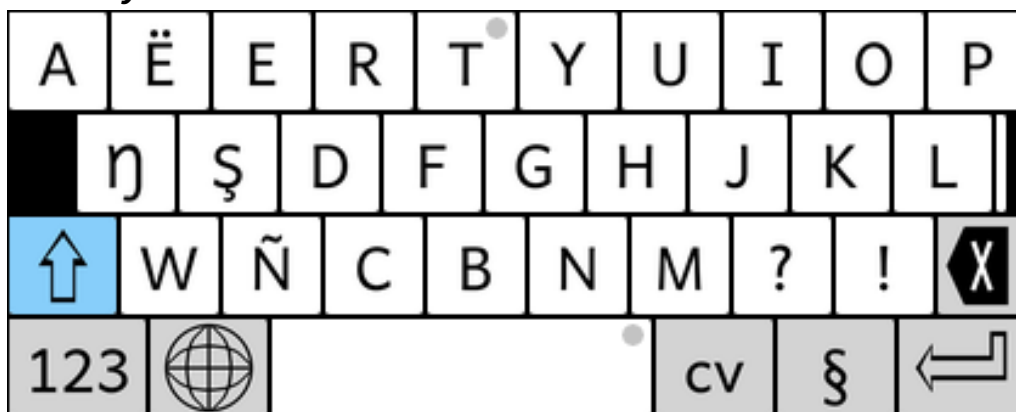

Touch keyboard (Android, iOS).

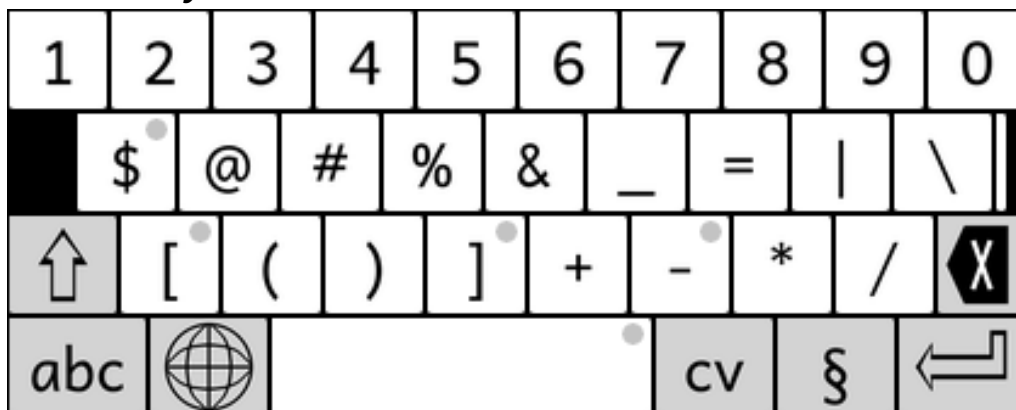

Default layer "abc"

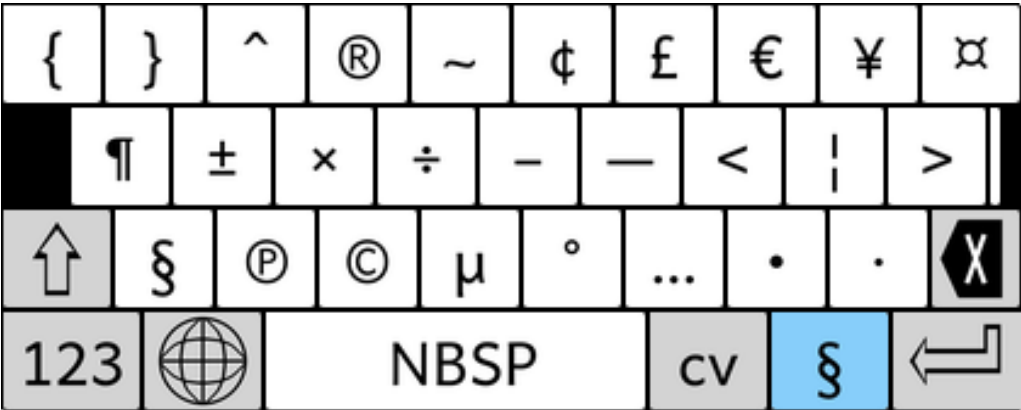

Shift layer

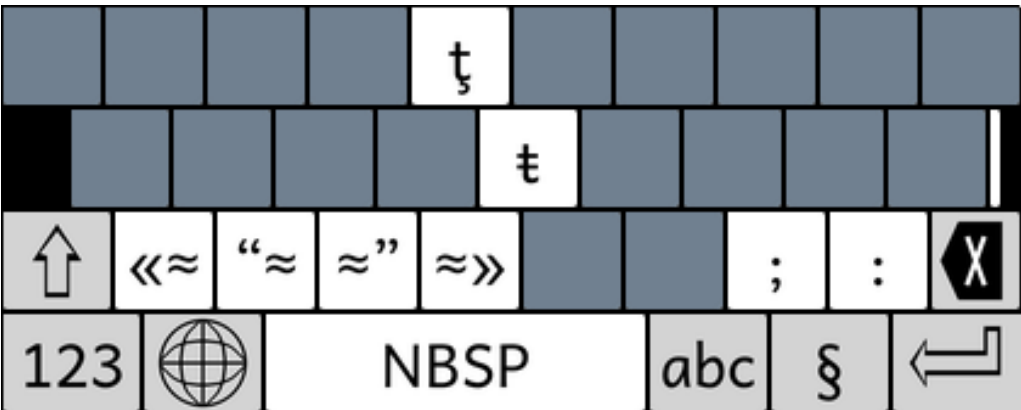

Numeric layer "123"

the others

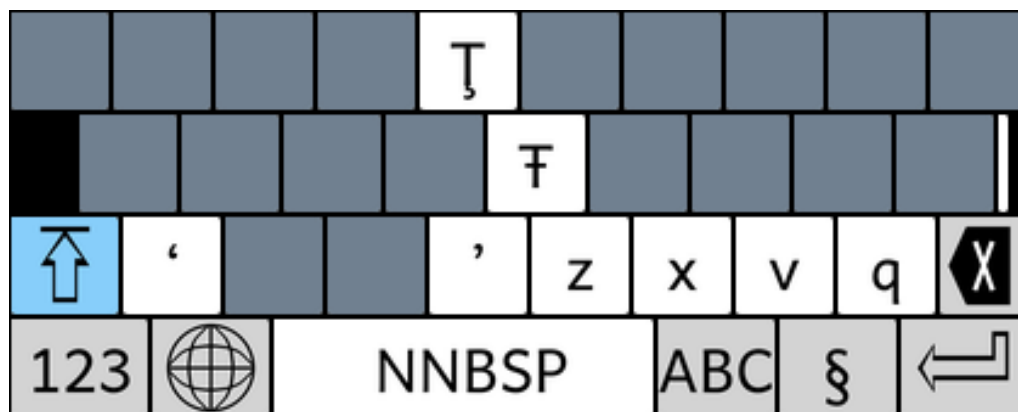

The Others

CAPS layer "ABC"

The Other CAPS

Double tapping the 'Shift'(up arrow) key will activate the Caps layers, a third tap will revert back to the 'default' layer.

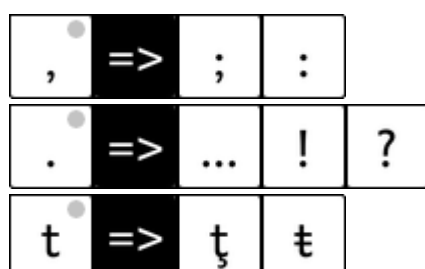

N.B. '≈' is a non-breaking space and '≡' is a narrow non-breaking space.

On the 'default', 'shift' and 'numeric' layers:

A long press on the space bar will yield the following context menu.

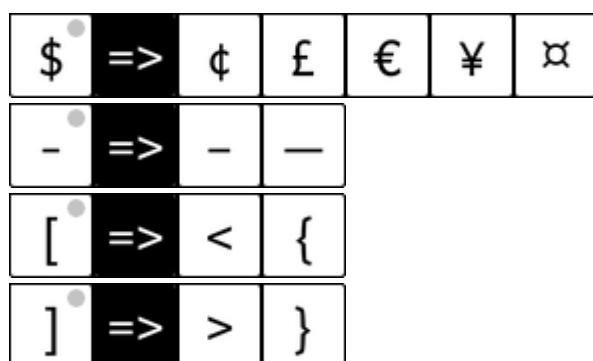

Default layer "abc"

Shift layer

Numeric layer "123"

CAPS layer "ABC"

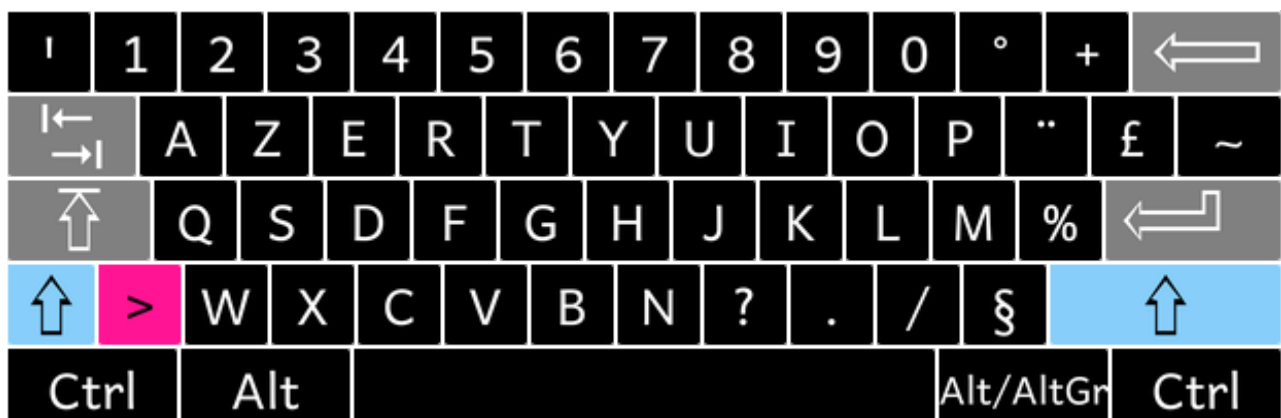

Layout for the Web keyboard and the physical keyboards for Windows, Mac, Linux, Android and iOS.

- '≈' is a non-breaking space and '≠' is a narrow non-breaking space.
- The pink key is not present on all keyboards.
- The 'CAPS LOCK' key (Up arrow with bar) is supported on the desktop, but it's level of support on web and onscreen keyboards is variable. On Windows and Mac desktop keyboards the 'Shift' key will temporarily remove the 'Caps Lock', but on Linux desktops touching the 'Shift' key releases 'Caps Lock'.
- On some keyboards the solidus key (second row from top on the far right) may drop to the third row depending on the shape of the 'Enter' key.
- On the Mac OSK the 'CTRL', 'CTRL+ALT' and 'SHIFT+CTRL+ALT' layers are shown as blank and generate no characters if clicked on, though the physical keyboard works as described below.
- On the Mac physical keyboard if the pink key is present (between the left 'Shift' key and the 'Z' key) this may be transposed with the 'grave' key (key at the top left) on some keyboards.

Modifier sequences:

Where the base character key is followed by a modifier key to produce the desired character. All characters are available from the default and shift layers of the keyboard using modifier sequences. If you get an unexpected character output it may be because of an overlooked modifier sequence.

N.B. If you position the cursor in the middle of a string of characters the modifier key will be applied to the preceding character. If a space is followed by a modifier key, the space will be replaced by the modifier character.

	modifier								modifier								modifier

In the above tables, where the output of a sequence is shown as a blank and in all other unspecified sequences the modifier character will be generated directly without affecting the preceding character.
